MODLIGHT70
BRIGHT CHOICES!

Maximum flexibility to select and combine any color – this is the outstanding feature of the tried and tested Murrelektronik Modlight70 signal tower. Thanks to the modular design concept, signal lights in five colors can be conveniently combined. There are two basic elements available: with or without sound.

Modlight70 is also available with integrated AS-Interface electronics.

The Modlight70 AS-Interface slave 3.0 can be integrated into a network with an M12 connector. This saves time and ensures reliable and problem free connections. The Modlight70 signal tower modules can be conveniently connected with notches. The LEDs are available in red, orange, green, blue, and clear and the wiring terminals are colored accordingly. This makes identification easy and allows fast assembly.

YOUR ADVANTAGES WITH MODLIGHT70

- **Flexible and modular**
- **Easy to assemble**
- **Maintenance-free and durable**
- **Energy saving LED technology**
- **Acoustic alarm up to 90 dB**
- **Pluggable M12 connection, at the bottom or at the side**
- **AS-Interface in AB technology, latest specification 3.0**
- **Matching M12 connectors and AS-Interface installation technology**
