PROFIBUS connector 90° with (l.) and without (r.) PG interface

The PROFIBUS connector 90° is equipped with a proven and reliable screw terminal. It is quickly mounted and has integrated, connectable terminating resistors.
For improved EMC compatibility, the housing of the plug is metalized.
The PROFIBUS connectors also work in the extended ambient temperature range of -25 °C to +85 °C[1].

FEATURES

· Metalized housing
· No parts that can be lost
· Integrated switchable terminating resistor
· 90° cable outlet
· Proven screw terminal

TECHNICAL DATA

PG socket Order No. 700-972-0BB12 Order No. 700-972-0BA12	**Yes** **No**
Dimensions in mm (D x W x H)	64 x 40 x 17
Weight	Approx. 40 g
Cable outlet	Vertical cable outlet, suitable for FastConnect wire stripping tool
Terminating resistor	Resistor combination integrated and switchable using slide switch
Transfer rate max.	12 Mbps
Interfaces PROFIBUS participants	SUB-D, 9-pin
Maximum outside diameter	8.0 mm
PROFIBUS cable	60/75 °C copper cable up to 1.0 mm²
Connector type	4 serial terminals
Supply voltage	4.75 ... 5.25 V DC (must come from the device)
Current draw max.	12.5 mA
Pollution degree	2
Ambient temperature Transport and storage temperature Relative humidity max.	-25 °C ... +85 °C[1] -25 °C ... +85 °C 75% at +25 °C

PROFIBUS connector, 90° EasyConnect®

PROFIBUS connector, 90° EasyConnect®

FEATURES

· Metalized housing
· No parts that can be lost
· Integrated switchable terminating resistor
· 90° cable outlet
· Quick-connect technology EasyConnect®
· Visual connection control

The PROFIBUS connector 90° EasyConnect® features quick-connect technology, making stripping of the bus wires unnecessary. With the aid of a visual connection control, it is also possible to check that the PROFIBUS cable is correctly connected after it is mounted.
For improved EMC compatibility, the housing of the plug is metalized.
The EasyConnect® connectors also work in the extended ambient temperature range of -25 °C to +85 °C[1].

PROFIBUS connector, 90° diagnosis **EasyConnect**®

FEATURES

· 3 status LEDs to indicate "bus operation," "participant is sending," "terminating resistor inserted"
· Metalized housing
· No parts that can be lost
· Integrated switchable terminating resistor
· 90° cable outlet
· Quick-connect technology **EasyConnect**®
· Visual connection control

The PROFIBUS connector 90° **EasyConnect**® diagnosis features quick-connect technology, making stripping of the bus wires unnecessary.

With the aid of a visual connection control, it is also possible to check that the PROFIBUS cable is correctly connected after it is mounted.

For improved EMC compatibility, the housing of the plug is metalized.

Using the PROFIBUS connector diagnosis, a PROFIBUS network can be established in which the user can at any time check the state of the bus system at a glance.

The three built-in LEDs with the easily distinguished colors blue, green, and orange indicate the most important states of the PROFIBUS network at each station. The state of the terminating resistor (orange), whether bus activity is present (green) and whether the addressed participant is participating in the bus traffic (blue) are displayed.

In this way you can immediately recognize error states such as bus interrupts, missing or incorrectly connected terminating resistors, and malfunctioning or failed bus participants.

The **EasyConnect**® connectors also work in the expanded ambient temperature range of -25 °C to +85 °C[1].

PROFIBUS connector, 90° with ATEX approval

PROFIBUS connector 90° with ATEX approval is suitable for use in hazardous areas of zone 2 (explosive gas atmosphere occurs only rarely and briefly).
The bus connector is plugged directly into the PROFIBUS interface (SUB-D socket, 9-pin) of the PROFIBUS participants. The PROFIBUS cables are connected using 4-pin screw terminals. A slide switch is used to set whether the connector is to be used as a node or at the segment end. The switch can also be operated in the installed condition. The setting is clearly visible.
The plug is quickly mounted and has integrated, connectable terminating resistors.

FLEXtra® twinRepeater, PROFIBUS repeater

FLEXtra® twinRepeater, PROFIBUS repeater

FEATURES

· Can be used for bus extension or as a stub
· Increase the number of participants
· System expansion
· Can also be used in MPI networks
· Status LEDs for each segment
· Repeating function can be switched off
· Electrical isolation

Despite its small size, the FLEXtra® twinRepeater is a full PROFI-BUS repeater designed for mounting on a DIN rail.
It regenerates the incoming electrical signal on a bus line and retransmits it (bit reshaping and retransmission).
The signals are restored in level, slope, and duty cycle.
The FLEXtra® twinRepeater supports data rates of 9.6 kbps to 12 Mbps and recognizes them automatically.
It can be used for bus extension (up to 1 km with 2 FLEXtra® twin-Repeaters), to increase the number of participants, and to expand the system. At the same time, use in MPI networks is possible. As a special application option, the FLEXtra® twinRepeater allows the setup of stubs as separate segments.
The status LEDs integrated for each segment provide a quick overview of the current bus status. Furthermore, the FLEXtra® twinRepeater provides electrical isolation between the two PRO-FIBUS segments.
In addition, it has a switch to turn off the repeating function. The segments are separated but continue to function for themselves.
For connection to the PROFIBUS cable, PROFIBUS connectors are required (also available in a set).

TRANSITION RATE	MAX. SEGMENT LENGTH

FLEXtra® multiRepeater 4-way/6-way, PROFIBUS repeater

FLEXtra® multiRepeater 4-way/6-way, PROFIBUS repeater

FEATURES

· Setup of star networks
· System expansion by up to six segments with one device
· Increase the number of participants
· Can be used for bus extension or as a stub
· Can also be used in MPI networks
· Status LEDs for each segment
· Repeating function for each segment or totally disabled
· Electrical isolation of all segments

The FLEXtra® multiRepeater is a multi-PROFIBUS repeater designed for mounting on a DIN rail.
It regenerates the incoming electrical signal on a bus line and retransmits it (bit reshaping and retransmission).
The signals are restored in level, slope, and duty cycle.
The multiRepeater supports data rates of 9.6 kbps to 12 Mbps and recognizes them automatically.
It can be used for bus extension, to increase the number of participants, and to expand the system. At the same time, use in MPI networks is possible.
As a special application option, the multiRepeater allows the setup of a star network with independent segments.
The status LEDs integrated for each segment provide a quick overview of the current bus status. Furthermore, the FLEXtra® multiRepeater provides electrical isolation between the PROFIBUS segments. In addition, it has a DIP switch for switching off the individual segments and a switch for turning off all segments. The segments are separated but continue to function for themselves.
For connection to the PROFIBUS cable, PROFIBUS connectors are required.

PROFIBUS compact repeater

PROFIBUS compact repeater

FEATURES

· Alternative to conventional PROFIBUS repeaters
· No additional space required in the control cabinet
· Can be used for bus extension or as a stub
· Increase the number of participants
· System expansion
· Can also be used in MPI networks
· Status LEDs
· No 24 V supply required
· 5 V power supply directly from the PROFIBUS connection, making it usable on every PROFIBUS device
· Electrical isolation

The patented PROFIBUS compact repeater is a full PROFIBUS repeater that is versatile due to its very small size. It enables transfer rates of 9.6 kbps to 12 Mbps.

The transmission signals are regenerated by the repeater and re-sent (bit-reshaping and retransmission) so that faults in the line are largely eliminated.

The PROFIBUS compact repeater is a great alternative to conventional repeaters for a large number of applications, both technically and in terms of price. It can be used for bus extension (up to 1 km with 2 PROFIBUS compact repeaters), to increase the number of participants, and to expand the system. Use in MPI networks is also possible. As a special application option, the PROFIBUS compact repeater allows the setup of stubs as separate segments. For this it can be plugged directly into the PG connection of an existing PROFIBUS connector.

Due to the compact design, no additional space is needed in the control cabinet, as the PROFIBUS compact repeater can be used instead of a PROFIBUS connector and is simply plugged into a participant on the PROFIBUS network. Furthermore, no separate power supply is required, because the PROFIBUS compact repeater uses the 5 V power supply, which every PROFIBUS device makes available for the terminating resistor. The PROFIBUS compact repeater establishes a potential separation between the two PROFIBUS segments.

The integrated status LEDs provide a quick overview on the current bus status.

OPTopus, PROFIBUS optical link

OPTopus, PROFIBUS optical link

The OPTopus PROFIBUS optical link is a full PROFIBUS repeater with integrated FO interface. It enables PROFIBUS transmission rates from 9.6 kbps to 12 Mbps with automatic baud rate detection. Due to the optical signal transmission, it offers complete electrical isolation between the PROFIBUS participants and PROFIBUS subnets. Another advantage of OPTopus is the insensitivity to EMC influences.

Due to the compact design, no additional space is needed in the control cabinet, as it can be used instead of a PROFIBUS connector and is simply plugged into a participant on the PROFIBUS network.

Furthermore, no separate power supply is required, because the OPTopus uses the 5 V power supply, which every PROFIBUS device makes available for the terminating resistor.

The transmission signals are converted into optical signals by the OPTopus and are transmitted on the fiber-optic link; in addition, they are also regenerated with slope, level, and duty cycle.

The OPTopus is available with 3 different optical interfaces and is therefore perfectly compatible with existing transmission systems. It is suitable for POF[1] and PCF[1] FO. For the short range up to 65 m, an optical transmission link can be established very quickly and without much effort using the POF. For this purpose, the matching connector is included with the OPTopus. All that is needed is a standard POF[1] FO. For longer distances up to 250 m, PCF[1] FO can be used.

The optical interface of the OPTopus sends in the visible range (650 nm red light), which allows an initial check of the optical transmission link without expensive instruments.

The OPTopus offers the advantages of a normal repeater, such as: Bus extension, increasing the number of participants and expanding the system. Use in MPI networks is also possible.

As a special application option, the OPTopus allows the setup of stubs as separate segments. For this it can be plugged directly into the PG connection of an existing PROFIBUS connector.

For diagnostic purposes, the OPTopus has one Traffic and one Error LED for the PROFIBUS interface, along with one of each for the optical interface. In this way you are always informed about the bus state, and targeted troubleshooting is ensured.

There is also a Power LED that provides information about the operating state and the status of the terminating resistor.

FEATURES

· PROFIBUS baud rate (9.6 kbps ... 12 Mbps) automatic detection
· Compact design, no bigger than a Helmholz PROFIBUS connector
· Display of traffic/bus errors separately for the FO and PROFIBUS segment
· Switchable terminating resistor with optical display
· Complete electrical isolation
· Insensitive to EMC influences
· No 24 V voltage supply required
· Available with 3 different optical interfaces (SMA, BFOC[2], Versatile Link[3])
· Suitable for POF[1] and PCF[1] FO
· Range: Cable length POF[1] 65 m
           Cable length PCF[1] 250 m
· POF[1] FO connectors provided

Note

1) PCF stands for polymer clad fiber and is synonymous with HCS. POF stands for polymeric optical fiber.
For the PCF/HCS assembly, extra PCF/HCS connectors are required, along with a special assembly tool according to the required connector technology. You get the appropriate PCF/HCS connector from your fiber-optic cable supplier.

2) BFOC stands for bayonet fiber-optic connector. This type of connector is functionally compatible with ST connectors.

3) The connector type Versatile Link is functionally compatible with HP Simplex/Duplex connectors.

FLEXtra® FO, PROFIBUS optical hub

FLEXtra® FO, PROFIBUS optical hub

The FLEXtra® FO is a PROFIBUS repeater expanded by 2 (with the FLEXtra® FO 650-2) and 5 (with the FLEXtra® FO 650-5) optical MPI/PROFIBUS segments.

It enables conversion of electrical MPI/PROFIBUS interfaces into optical MPI/PROFIBUS interfaces.

On PROFIBUS, the FLEXtra® FO reaches transmission rates from 9.6 kbps to 12 Mbps with automatic baud rate detection. Due to the optical signal transmission, it offers complete electrical isolation between the PROFIBUS participants and PROFIBUS subnets. Another advantage of the FLEXtra® FO is its insensitivity to EMC influences. The transmission signals are converted by the FLEXtra® FO into optical signals and sent across the fiber-optic link. In addition, the signals are regenerated in slope, level, and duty cycle.

The FLEXtra® FO is perfect with existing transmission systems, since it is available with 3 different optical interfaces. It is also suitable for POF[1] and PCF[1] FO.

For the short range up to 65 m, an optical transmission link can be established very quickly and without much effort using the POF[1]. For longer distances up to 250 m, PCF[1] FO can be used. The optical interface of the FLEXtra® FO sends in the visible range (650 nm red light), which allows an initial check of the optical transmission link without expensive instruments.

The FLEXtra® FO features integrated status LEDs for each segment for diagnostic purposes. In this way you are always informed about the state of the bus and the optical interface, and targeted troubleshooting is ensured.

In addition, the FLEXtra® FO has DIP switches for turning off individual or all segments. The segments are separated but continue to function for themselves.

FEATURES

· PROFIBUS repeater with 2/5 optical MPI/PROFIBUS segments
· Perfect to combine with existing transmission systems
· PROFIBUS baud rate (9.6 kbps ... 12 Mbps) automatic detection
· Switching off of individual or all segments possible
· For use in EMC-hazardous environments
· Suitable for POF[1] and PCF[1] FO
· Available with 3 different optical interfaces (SMA, BFOC[2], Versatile Link[3])
· Range: Cable length POF[1] 65 m
         Cable length PCF[1] 250 m
· Display of traffic/bus errors for each FO and PROFIBUS segment

viBlu, PROFIBUS wireless system

viBlu, PROFIBUS wireless system

FEATURES

· Adjustable transmission power
· Up to 3 radio slaves on a radio master
· Bluetooth in the license-free 2.4 GHz band
· Up to 1.5 Mbps PROFIBUS-DP
· Easy configuration via USB interface
· No configuration in STEP[1] 7 necessary
· Comprehensive diagnosis of the wireless interface
· Ranges up to 100 m

The PROFIBUS wireless system viBlu is a virtual cable that enables the connection of distributed peripherals/intelligence (such as turntables, conveyor systems, etc.) by radio.

The data transfer takes place in the unlicensed 2.4 GHz band via Bluetooth and supports PROFIBUS baud rates from 9.6 kbps to 1.5 Mbps. Depending on local conditions, transmission links up to 100 m are possible.

The use of the PROFIBUS wireless module is possible in both single-master and multi-master systems, and permits full expansion on the PROFIBUS side; PROFIBUS DP slaves are supported behind a viBlu slave

The wireless system is powered by an external voltage supply of 24 V DC. A 9-pin Sub-D socket is used for the PROFIBUS connection. A USB interface is also integrated, which is used to parameterize the wireless link.

Five LEDs on the device provide information about the operating status on PROFIBUS and the wireless side.

Through a RP-SMA socket on the device, antennas with a larger gain can optionally be connected with the wireless module for range optimization.

Outside Europe, the use of antennas with a gain over 10 dBi is permitted, so that radio relay systems with a range of up to several km should be possible, for example.

Accessories note
For antennas, see page 32.

To optimize the reception performance of the PROFIBUS wireless system viBlu and NETLink® WLAN, we offer a selection of different antennas. Depending on the antenna design, appropriate connection cables can be purchased.

When planning a wireless link, it is necessary to consider both with a mobile and stationary installation that the range may be influenced more or less by obstacles and the surrounding buildings. Due to the maximum transmission power of 100 mW in the 2.4 GHz range, wireless links of 10 to 30 meters are possible in buildings. Outdoors, 100 to 300 meters are considered realistic with line-of-sight connections.

With a directional panel antenna, wireless links exceeding 300 meters are also possible under optimum conditions.

Magnetic base antenna 5 dBi
For mounting on smooth magnetic surfaces. The action radius is increased by the permanently mounted 1.5-meter-long connecting cable. The magnetic base can be unscrewed. In this way the dipole can also be operated directly on the WLAN module, which is especially suitable for medium distances with clear line of sight. With the integrated articulated joint, the circular antenna can always be aligned correctly.

Omni-directional antenna 8 dBi
This omni-directional antenna protected by the sturdy GRP pipe is delivered with a mounting bracket for mounting it on masts or walls – preferably outdoors.
For best omni-directional characteristics, metallic surfaces and obstacles in the vicinity of the antenna should be avoided. For the N-type connector, a cable available in the accessories is required.

Panel antenna 8 dBi (wall mounting) and panel antenna 18 dBi (mast mounting)
Ideal for use in directional transmission and reception indoors and outdoors.
The range and WLAN performance is significantly improved by this design. The corresponding fixtures are included. For the N-type connector, a cable available in the accessories is required.

DP/DP coupler

FEATURES

· Exchange of up to 244 bytes of input and 244 bytes of output data between two PROFIBUS networks
· Redundant power supply
· Electrical isolation between the PROFIBUS networks
· Setting of the PROFIBUS addresses using DIP switches or software
· PROFIBUS-DP up to 12 Mbps

The DP/DP coupler interlinks two PROFIBUS DP networks together and enables data transfer between the masters of the two DP networks.
The maximum size of the transmitted data is 244 bytes of input data and 244 bytes of output data. The DP/DP coupler is configured in the S7 software or with a GSD file.

FLEXtra® profiPoint, active termination and measuring point

FLEXtra® profiPoint, active termination and measuring point

FEATURES

· Power supply independent of the bus participants
· Device-independent bus termination due to a separate power supply
· Suitable for use as an active measurement point
· Supply of active PROFIBUS components (compact repeater, NETLink®, PROFIBUS diagnostic connector)

The FLEXtra® profiPoint is used primarily to supply the terminating resistor and is designed for mounting on a DIN rail.
It can be used in conjunction with a PROFIBUS connector as the active measurement point or as an active terminator. Power is supplied independent of the bus through a socket.
Through the use of an active terminating resistor, participants of the bus system can optionally be switched on and off without causing malfunctions.
An integrated LED allows the correct function of the profiPoint to be read. For connection to the PROFIBUS cable, a PROFIBUS connector is required (also available in a set).
Application example FLEXtra® profiPoint

ORDERING DATA

TECHNICAL DATA

Dimensions in mm (D x W x H)	35 x 32 x 72
Weight	Approx. 85 g
Supply voltage	18 ... 30 VDC
Output voltage	24 VDC / 5 VDC
Electrical isolation	500 V
Current draw max.	400 mA
Segment connection	Via PROFIBUS connector
Ambient temperature Transport and storage temperature	0 °C ... +60 °C -25 °C ... +75 °C
Protection rating	IP 20

Active PROFIBUS connecting cable; PROFIBUS cable, assembled

Active PROFIBUS connecting cable for PG
Example of active connecting cable

The active PROFIBUS connecting cable is used for easy connection of a PG to an existing PROFIBUS network.
Due to the integrated electronics, it is not a stub.

TECHNICAL DATA

Dimensions in m (length)	3
Weight	Approx. 260 g
Supply voltage	DC 5 V
Current draw max.	100 mA at 5V
PROFIBUS interface Transfer rate max.	 12 Mbps
Connector	SUB-D, 9-pin
Ambient temperature Transport and storage temperature	0 °C ... +60 °C -25 °C ... +75 °C
Protection rating	IP 20

PROFINET

Connectors
PROFINET Switch
PN/CAN gateway

FEATURES

· Color-coded connector contact elements help to prevent
  connection errors
· Transmission rates up to 100 Mbps
· No loose individual parts
· Tool-free installation
· **EasyConnect**® RJ45 connection (IDC) for industrial
  applications
· For PROFINET, Modbus and EtherCAT

PROFIBUS connector, RJ45, **EasyConnect**®

The field-assembled RJ45 connectors for PROFINET, EtherCAT, and Modbus are easy and quick to install. The industrial-grade metal housing provides the necessary ruggedness so that the plug can be used in many industrial applications.

To save the user time in wiring, the RJ45 connectors are to be assembled in one step using the quick-connect technology **EasyConnect**®. Solid single wires and strands can be used, and the color-coded contact elements help prevent connection errors. Currently, RJ45 industrial connectors with axial and 90°-angled cable outlets are available. With a PROFINET cable of up to 100 m length, Ethernet components such as a PROFINET station can be connected. In addition, the RJ45 connectors are designed in protection class IP20 and for transmission rates up to 100 Mbit/s.

PROFINET Switch, 4-port, managed

FEATURES
· PROFINET Conformance Class B
· Managed Switch with 4x100 Mbps RJ45 Ports
· Integration into the automation network with GSDML file
· Quick and easy configuration and diagnosis via web interface or PROFINET
· Configuration via command lines (Telnet, SSH, USB)
· LLPD, DCP, SNMP, diagnosis alarms
· Media redundancy: MRP client via ports 1+2
· Port mirroring
· Network statistics (frames and errors)
· Time synchronization via SNTP
· Firmware updates via web server
· Compact, industry-compatible design for installation on DIN rails

With the 4-port-managed PROFINET switch, PROFINET participants can be connected saving time and costs.
With a GSDML file, you integrate the 4-port switch into your automation environment as usual. The compact and industry-compatible design for DIN rail installation convinces, as does the web interface for configuration and diagnosis. It is also possible to carry out a diagnosis and/or configuration via Telnet, SSH or USB. The supported PROFINET protocols, such as LLPD, DCP or even diagnosis alarms, can be easily configured and administered. The transmission speed of up to 100 Mbit/s, which can be defined for each port, is as much a standard feature as the PROFINET Conformance Class B and the MRP Client for transmission security through ring redundancy.

PROFINET FUNCTIONS
· Allocation of a network configuration on the basis of the device name
· Definition of the transmission process and speed of a port (auto-negotiation or fixed setting up to 100 Mbits/s full-duplex)
· Activate/deactivate port
· Set DCP/LLDP boundary for a port
· Set up PROFINET switch as MRP client
· Device exchange without programming device

ORDERING DATA	ORDER NO.
PROFINET switch, 4-port, managed (incl. Quick Start Guide)	**700-850-4PS01**

Application example for PROFINET Switch, 4-port, managed

TECHNICAL DATA

Dimensions (D x W x H)	35 x 59 x 75 mm
Weight	250 g
Number of inputs/switching point	2/DC 24 V, as per DIN EN 61131-2 Type 2
PROFINET interfaces · Protocol	PROFINET IO as defined in IEC 61158-6-10
· Physical layer	Ethernet
· Transmission rate	100 Mbps, full-duplex
· I/O image size	Up to 1440 bytes
· Connector	4 x RJ45, integrated switch
· Features	Conformance Class B; media redundancy (MRP); Automatic addressing/topology detection (LLDP, DCP)
USB interface	USB 2.0, mini USB
Status indicator	4 LEDs
Current draw	Max. 250 mA with DC 24 V
Ambient temperature	0 °C ... +60 °C (-20 °C ... +70 °C in development)
Transport and storage temperature	-20 °C ... +60 °C
Protection rating	IP20
Certifications	CE, GCF, FCC, PTCRB, IC

PN/CAN Gateway

FEATURES

· PROFINET IO device as per IEC 61158-6-10
· Integrated 2-port switch
· Full duplex 100 Mbps transmission rate
· Conformance class B
· Media Redundancy Protocol (MRP)
· Up to 127 CANopen® participants
· Up to 1 Mbps CAN baud rate
· Easy configuration via GSDML file, no handling blocks or parameterization software necessary
· CANopen® master and CAN layer 2 possible
· Up to 16 PDOs per CANopen® slave
· SDO communication, emergency messages, participant monitoring with heartbeat and node guarding
· Extensive diagnostic functions
· 3 two-color status LEDs
· USB interface for online diagnostics and firmware update
· DIN rail mounting

The PN/CAN gateway connects CANopen® devices in a PROFINET network. At the same time, it is a full-fledged CANopen® master. As the master, it supports gateway network management, SYNC telegrams, and node guarding / heartbeat for monitoring the participants.

On the PROFINET network, the PN/CAN gateway is a PROFINET IO device that supports transfer rates up to 100 Mbps full duplex, and on the CAN bus up to 1 Mbps is supported.

The IO data (PDOs) of the CANopen® participants is transparently displayed in a freely configurable manner in the PROFINET network and can be processed directly in the PLC.

The PN/CAN gateway is integrated with a GSDML file in the hardware configurator and can be completely configured there. Other software tools for parameterization or handling blocks for programming are not required.

Parameterization of the CANopen® participants using SDO telegrams and management of emergency messages is also possible. **Device variants with CAN Layer 2 and CANopen® Slave are in development.**

Remote maintenance

Ethernet routers
VPN portal
Modems
Adapters for remote maintenance
Teleservice modules

Mechanical and plant engineering

REX industrial routers enable manufacturers of machines to directly access their customers' Ethernet systems in a secure and flexible manner.
In this way the technicians at the headquarters remain connected with the machines for maintenance and service in spite of worldwide deployment of the machines.
The REX Global SIM can be used to implement this global connectivity easily with cost control.

Energy and environment

Wind energy is a participant in the generation of renewable energy that is more important than any other renewable energy source. But wind turbines are technically complex systems that are exposed to very high loads during operation.
Regular review of their condition and maintenance of safe operation is therefore essential. However, this is difficult because wind turbines are often erected in hard-to-reach areas or in the ocean. The solution is teleservice access, which provides a flexible and reliable connection to the control center and makes constant condition monitoring possible.

Water supply/infrastructure

Networking of pumping stations or remote monitoring of water treatment plants can be implemented easily and safely with the modern industrial router system REX. In this way it is possible to monitor data and facilitate the resolution of problems in case of operational disturbances or deviations in the parameters.
Likewise, it is also possible to connect distributed stations to a higher-level system.

Building automation

In modern industrial and office buildings, many activities now run automatically, such as switching on of lights and controlling the heating and ventilation system as required and on a schedule. An intelligent control system saves energy, protects the environment, and conserves resources.
The industrial routers of the REX family can be used to monitor the control system at any time and take corrective action when necessary. With the Ethernet routers, it is possible to access the control system conveniently from your desktop or on a mobile basis via tablet PC or smartphone.

REX 100, Ethernet router

REX 100, Ethernet router

FEATURES

· Integrated 3- or 4-port LAN switch
· Space-saving compact size
· WAN/LAN, 3G/LAN or LTE/LAN variants available
· Using "CTM," download and activate the configuration directly from the VPN portal.
· Digital inputs for establishing a connection and issuing alarms
· Integrated firewall
· 3G/UMTS, LTE (Wi-Fi in development)

The REX 100 industrial routers present themselves in a compact design. Nevertheless, they offer all the features you expect from a state-of-the-art remote maintenance solution.
Regardless of the manufacturer, Ethernet participants such as PLCs can be reached with the router.
The REX 100 router is systematically designed to operate in conjunction with the VPN portal myREX24: All programming and remote maintenance is carried out on the portal. Data transmission is via encrypted VPN tunnel on the basis of the secure Open-VPN protocol.

Accessories note

REX 300 Ethernet router

FEATURES

· Remote access to Ethernet-enabled devices
· Directly connect S7-MPI/PROFIBUS devices
· Service RS-232/RS-485 devices remotely via Internet
· Integrated firewall
· I/O manager for reading and archiving a maximum of 256 PLC variables
· Redundant management of multiple Internet interfaces
· S7-MPI/PROFIBUS driver included

The REX 300 Ethernet routers are specially designed for use in industrial environments; they enable reliable and secure Internet teleservicing of machinery and equipment. Thanks to the integrated Firewall, remote access is allowed only for authenticated users.

An additional serial port in router versions with a WAN connection makes it possible to incorporate serial devices into your remote servicing network.

In combination with the VPN portal myREX24, you get the full service range of the industrial routers.

Accessories note
Antennas for GSM/UMTS, see ordering data.
In order to connect serial devices to the REX 300 with WAN port, an adapter cable is required for the serial interface (see ordering data).

Functional principle of myREX24

myREX24, VPN portal

The VPN portal myREX24 serves as a mediation server for VPN communication between the provider of remote maintenance and the customer facility:

This means both sides can establish the VPN tunnel as an outgoing connection.

Firewalls and limitations of services or mobile operators are thus no longer an issue, because these only limit data traffic into the network and not out of the network. The outgoing connections are briefly on hold until the VPN tunnel is established, and then the actual communication takes place there.

In order to use the myREX24 system, all that is required is an Internet connection and an access account, which is set up once. The configuration of the REX routers is also created on the portal and can then be easily transferred to the router.

The myREX24 VPN portal is hosted at a high-performance data center. A redundant connection with 365/24/7 monitoring guarantees an average annual network availability of at least 99%.

YOUR ADVANTAGES

· Redundant portal hosting (>99 % availability)

· shDIALUP software for easily establishing a connection from a PC

· Configuration of the REX router on the myREX24 VPN portal

· User and permissions management system

· Reports on every single connection that is established

· myREX24 company edition – exclusive server with high reliability and its own IP address

Note
You can find additional information and ordering data on page 50.

myREX24 company edition

Do you want your own mediation server for your company?
Is your IT department demanding a closed system?
Do you need complete system performance for your own remote maintenance applications?
Do you need special functions?
Then use the "company edition" of myREX24. We host the system exclusively for you in a professional data center.

YOUR ADVANTAGES

· High reliability through exclusive redundancy

· Individual customized design

· Exclusively for your business

· A variety of performance variants

Note
You can find additional information and ordering data on page 50.

REX Global SIM

The prepaid card REX Global SIM is specially designed for teleservice and M2M applications. It is used for global connectivity of the REX industrial router to the VPN portal myREX24 – for data capture, visualization, alerting, teleservice, or direct M2M communications.

FEATURES

· Network coverage in more than 50 countries worldwide
· Two possible rate zones (Europe and worldwide)
· No contract
· Support for GSM services (3G data and SMS)
· Simple, transparent pricing with no hidden costs
· Convenient management of multiple SIM cards on the MyM2M portal

shSMS

You can use myREX24 to activate a REX GSM router with an SMS text message. The SMS text message is sent to the defined cellular network number autonomously by the myREX24 portal using shSMS.

FEATURES

· Activating connections from myREX24
· Phone number stored in the configuration
· Simple cost control
· Sending of alarm SMS messages from devices without mobile connectivity

WEB2go

WEB2go is designed to enable you to monitor your equipment even when you are on the go by allowing you to retrieve the most important equipment data on your smartphone or tablet computer.

FEATURES

· Easy access through an HTML5-enabled web browser
· HTTPS encryption
· No additional software or app needed
· Ideal for mobile remote diagnostics via smartphones or tablet computers
· Monitoring and visualization

Ordering data for REX Global SIM, myREX24

1) Active connections
The number of active connections is the number of connections
between a user and a REX device. In other words, all users and REX
devices can be connected online to myREX24, but an active con-
nection only counts the moment a user connects to a REX.

2) Term
This license will be automatically renewed for one year unless
renewal is canceled at least four weeks before the license expires.

SSW7-TS, MPI adapter

The SSW7-TS can be used for remote maintenance of your system over a modem connection. To this purpose, a commercially available external modem (analog, ISDN, GSM) is connected to the RS232 interface of the SSW7-TS.

For local use, just connect the RS232 interface of the SSW7-TS to your PC. It automatically recognizes the baud rate used by the PC (9.6 to 115.2 kBaud).

On the system side, you can connect the SSW7-TS to an MPI network with 187.5 or 19.2 kbps.

On the PC, the programming software and teleservice software are required (such as teleservice for Simatic[1] STEP[1] 7) to parameterize the SSW7-TS when needed or to manage the modem connections. Without modem and teleservice software, the SSW7-TS can be used locally as a SSW7.

The SSW7->TS is supplied with voltage by the MPI bus of the CPU and can be deployed at any location in the system using an optional 24 V connection.

It is also possible to load the SSW7-TS with new firmware using a modem connection, which makes it possible to realize a functional expansion of an adapter already installed in the system.

Parameterization and diagnostic functions are possible using the SHTools software.

For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

FEATURES

· MPI up to 187.5 kbps
· Remote maintenance via external modem (analog, ISDN, GSM)
· Can be used with Hayes-compatible modems
· Password protection
· Callback function
· Remote update capability
· Use as a programming adapter on site

Application example for SSW7-TS

TECHNICAL DATA

Dimensions in mm (D x W x H)	105 x 53 x 29
Weight	Approx. 180 g
Supply voltage	+24 V ±25 % from AD or external
Current draw typ. max.	30 mA 45 mA
MPI interface Type	RS485
Transmission rate	19.2 or 187.5 kbps
Connector	SUB-D, 9-pin; with PG interface and terminating resistor
Communication interface Type	RS232
Transmission type	Asynchronous serial
Transmission rate	9.6 ... 115.2 kbps
Parity	Odd
Data format	8 bits
Protocols	PC <-> S7 via modem or local
Connector	Connector, SUB-D, 9-pin
Protection rating	IP 20

Starting with STEP[1] 7 version 5.5 SP2, Siemens no longer supports serial COM ports under Windows 7[2] 64 bit.
The TIA Portal[1] also no longer supports any COM ports, regardless of what operating system they are installed on!

1) STEP, Simatic, and TIA Portal are registered trademarks of Siemens AG.
2) Windows 7 is a registered trademark of Microsoft Corporation.

SSW7-TS, MPI adapter with modem; analog/GSM

FEATURES
· MPI up to 187.5 kbps
· Remote maintenance and on-site use
· Password protection and callback function
· RS232 interface
· Remote update capability
· DIN rail adapter for mounting included in the delivery
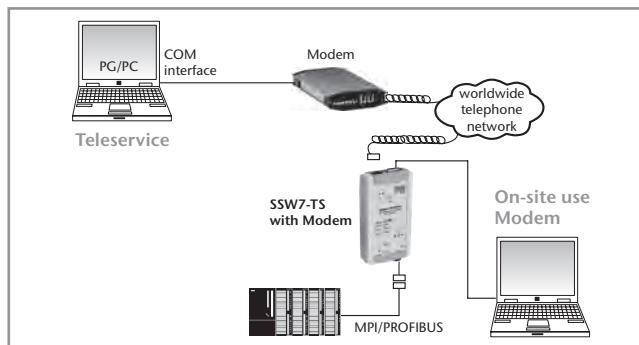

Application example for SSW7-TS with analog modem

The SSW7-TS with integrated modem is an economical alternative for remote maintenance of an automation device via the MPI bus.

Depending on the version, an analog or GSM modem is integrated in the housing of the SSW7-TS. The analog modem can be configured for use worldwide. All connecting cables required for operation are included. For mobile use, or if there is no telephone line, the SSW7-TS with GSM modem (quad band) is the right choice.

Using the serial interface, the SSW7-TS with modem can also be used as a PC adapter for on-site use. The respective modem can also be used for remote maintenance of a VISU/SCADA application without the TS adapter function.

The SSW7-TS with modem is powered by the CPU via the MPI cable or external voltage connection.

The SSW7-TS with modem can be provided with new firmware over a modem connection using the free software SHTools. This means a functional expansion of an adapter already installed in the system is possible. The latest SHTools version is available for download at no charge at our website www.helmholz.com.

Accessories note
For the SSW7-TS with GSM modem, you need a Mini-SIM card with activated CSD (Circuit Switched Data) service from your mobile provider and a suitable GSM antenna (for antennas, see page 56).

TECHNICAL DATA

Dimensions in mm (D x W x H)	135 x 67 x 30
Weight	Approx. 240 g
Supply voltage	+24 V ±25 % from AD or external
Current draw	Analog approx. 100 mA, GSM approx. 150 mA
MPI interface Type	RS485
Transmission rate	19.2 or 187.5 kbps
Connector	SUB-D, 9-pin; with PG interface and terminating resistor
Communication interface Type	RS232; 2-wire dial-up line (analog)
GSM frequencies	Quad band: GSM850, EGSM900, DCS1800, PCS1900
Transmission type	Asynchronous serial
Transmission rate	9.6 ... 115.2 kbps
Protocols	PC <-> S7 via modem or local
Connector	Connector, SUB-D, 9-pin, RJ11 or SIM card holder
Protection rating	IP 20

SSW7-TS PRO, MPI/PROFIBUS adapter with modem; analog/GSM

Integrated modem

MPI/PROFIBUS

MPI/PROFIBUS
Up to 12 Mbit/s

SSW7-TS PRO analog

FEATURES
· MPI/PROFIBUS up to 12 Mbps; Autobaud
· Remote maintenance and on-site use
· Password protection and callback function
· RS232 and USB interface
· Remote update capability
· Any number of SMS text messages can be sent from the PLC

The SSW7-TS PRO enables remote maintenance of an S7 system over a modem connection and supports connecting to an MPI or PROFIBUS network with up to 12 Mbps on the system side. Depending on the version, an analog, ISDN, or GSM modem is integrated in the housing of the SSW7-TS PRO. The analog modem can be configured for use worldwide. For mobile use, or if there is no telephone line, the SSW7-TS PRO GSM is the right choice. In addition to use as a remote maintenance solution, the SSW7-TS PRO can also be used as a PC adapter on-site with its RS232 or USB interface. Due to the integrated repeater, the MPI/PROFIBUS connecting cable of the SSW7-TS PRO is not a stub. This means the adapter can be plugged at any point along the bus even at 12 Mbps.
Power is supplied to the SSW7-TS PRO through the MPI/PROFIBUS connecting cable or on demand via the external voltage connection.
The SSW7-TS PRO allows any number of SMS text messages to be sent. Sending of the SMS is triggered by calling the function module SMS_SEND from the automation system.
Using the free software SHTools, firmware updates can be transmitted directly and via modem connection.
The latest SHTools version are available for free download from our website www.helmholz.com.

Accessories note
For the SSW7-TS PRO GSM, you need a Mini-SIM card with activated CSD (Circuit Switched Data) service and a suitable GSM antenna (for antennas, see page 56).

TS 300, teleservice module for the S7 rack

TS 300, teleservice module for the PLC rack

FEATURES

· MPI up to 187.5 kbps
· TS adapter in the S7 rack for remote maintenance
· Analog, GSM
· USB interface for parameterization or on-site use
· Password protection
· Callback function
· Remote update capability
· Alarm functions and switching outputs can be used via the backplane bus
· Operating mode switching via remote connection
· For each module, up to 2 alarm messages can be configured and sent by SMS
· Communication via backplane bus possible[3]

The TS 300 enables remote maintenance of a system via the MPI bus. It is inside a single-width S7 housing for mounting on the mounting rail. An analog modem that can be configured for worldwide use without an update is integrated into the housing of the TS 300. TAE and RJ11 cables are included in the scope of delivery. Alternatively, a variant with GSM modem is also available. The TS 300 can establish an MPI connection with the CPU via the backplane bus. Power can also be supplied through the backplane bus. This means the only thing else required for installation of a remote maintenance solution is the telephone line. The TS 300 does not need to be configured in the hardware configuration of the PLC and can be retrofitted at any time.
Alternatively, it can be supplied externally with 24 V. The MPI connection can also be established through the front-side 9-pin Sub-D socket.
An additional USB port is used to parameterize the TS 300 for on-site use as a PC adapter or for direct use of the internal modem.
The TS 300 can also be provided with new firmware using a remote connection. This means a functional expansion of a TS 300 already installed in the system is also possible.
Parameterization and diagnostic functions are possible using the SHTools software.
For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

Accessories note
For GSM antennas, see page 56.

Infrastructure/Security

Bridge/Firewall
PROFINET switch

WALL IE, Industrial Ethernet Bridge and Firewall

WALL IE, the Industrial Ethernet Bridge and Firewall, simply integrates your machinery network into the higher-level production network. A package filter protects the networks from unauthorized access. If identical IP address ranges are to be realized, WALL IE functions as a bridge.

The NAT operating mode serves the forwarding of the data traffic between various IPv4 networks. It enables the address translation via NAT and uses package filters for the limitation of access to the automation network located behind.

In the bridge operating mode, WALL IE acts as a layer 2 switch. In contrast with normal switches, however, package filtering is also possible in this operating mode. This means that the restriction of access to individual areas of your network can be achieved without having to use different networks for this purpose.

FEATURES

· Integration of machine networks into the higher-level plant network
· Bridge functionality for identical IP address ranges
· NAT: Basic NAT, NAPT, port forwarding
· Access restriction through package filters: IPV4 addresses, protocol (TCP/UDP), ports, MAC addresses (in development), Ether types (in development)
· 100 Mbps Industrial Ethernet
· Fast and easy configuration through responsive web interface
· Static routes to other networks
· Reporting of incidents to a Syslog server
· Industry-compatible design for installation on DIN rails

NAT operating mode
In the NAT operating mode, WALL IE forwards data traffic between various IPv4 networks (Layer 3).
Static routes are used for communication with other automation cells. To do so, the network and the address of the responsible router ("Next Hop") must be configured.

Bridge operating mode
In the bridge operating mode, WALL IE acts like a layer 2 switch between the automation cell and the production network. Nonetheless, the access between the two areas can be limited by the package filter. This allows the separation of a part of the production network without the use of different networks.

Package filter functionality
With the package filter, access between the production network and the automation cell can be limited. For example, it can be configured that only certain participants from the production network may exchange data with defined participants from the automation cell.
The following filter criteria at layers 3 and 4 are available: IPv4 addresses, protocol (TCP/UDP), ports. The layer 2 criteria MAC addresses and Ether types are in development.

NAT functionality
When several automation cells with the same address range are integrated into a production network, thus results in collisions, as the addresses in the entire network are not unique. Using Network Address Translation (NAT), WALL IE makes it possible to integrate several automation cells of the same type into the production network.

Basic NAT
Basic NAT, also known as "1:1 NAT" or "Static NAT", is the translation of individual IP addresses or entire address ranges. The translation takes place exclusively at the IP level, which means that all ports can be addressed without explicit forwarding.

NAPT: Network Address and Port Translation
NAPT, also known as "1:N NAT" or "Masquerading", is the translation of all addresses of the automation cell into a single address of the production network. The sender addresses of packages from the automation cell are replaced by these.
With the help of port forwarding, it can be configured that packages are forwarded to a certain TCP/UDP port of this address to a participant in the automation cell (e.g. 10.10.1.1:8080 to 192.168.10.2:80).

PROFINET Switch, 4-port, managed

FEATURES

· PROFINET Conformance Class B
· Managed Switch with 4x100 Mbps RJ45 Ports
· Integration into the automation network with GSDML file
· Quick and easy configuration and diagnosis via web interface or PROFINET
· Configuration via command lines (Telnet, SSH, USB)
· LLPD, DCP, SNMP, diagnosis alarms
· Media redundancy: MRP client via ports 1+2
· Port mirroring
· Network statistics (frames and errors)
· Time synchronization via SNTP
· Firmware updates via web server
· Compact, industry-compatible design for installation on DIN rails

With the 4-port-managed PROFINET switch, PROFINET participants can be connected saving time and costs.
With a GSDML file, you integrate the 4-port switch into your automation environment as usual. The compact and industry-compatible design for DIN rail installation convinces, as does the web interface for configuration and diagnosis. It is also possible to carry out a diagnosis and/or configuration via Telnet, SSH or USB. The supported PROFINET protocols, such as LLPD, DCP or even diagnosis alarms, can be easily configured and administered. The transmission speed of up to 100 Mbit/s, which can be defined for each port, is as much a standard feature as the PROFINET Conformance Class B and the MRP Client for transmission security through ring redundancy.

PROFINET FUNCTIONS

· Allocation of a network configuration on the basis of the device name
· Definition of the transmission process and speed of a port (auto-negotiation or fixed setting up to 100 Mbits/s full-duplex)
· Activate/deactivate port
· Set DCP/LLDP boundary for a port
· Set up PROFINET switch as MRP client
· Device exchange without programming device

NETLink® gateways

Ethernet gateways
WLAN gateways
High-speed USB gateways
for MPI/PPI/PROFIBUS

NETLink® PRO PoE, PROFIBUS Ethernet gateway

FEATURES

· RFC 1006 (ISO on TCP)
· CPU-to-CPU communication (with S7-300[1] and S7-400[1])
· Powered Device (PD) as defined in IEEE Standards 802.3af (POE) and 802.3at (POE+)
· Support for all common S7 engineering tools
· Dynamic address assignment using DHCP
· Security functions for securing TCP/IP access
· PLC write protection feature can be enabled and disabled
· Up to 16 TCP connections
· Up to 32 MPI/PROFIBUS connections
· Easy configuration via web interface
· Variables can be monitored on a browser window
· Support for configuring slave parameters
· Electrical isolation for MPI/PPI/PROFIBUS
· MPI/PPI/PROFIBUS from 9.6 kbps to 12 Mbps
· For S7-200[1], S7-300[1], S7-400[1]

The NETLink® PRO PoE for programming, configuring, and visualizing S7 PLCs draws its supply voltage through the CPU of the automation device, or optionally via externally supplied DC 24 V or a CAT5 network cable using a PoE power supply unit.
The 1.2 m long connecting cable is designed as an active cable and therefore does not affect bus participants installed in the system.
In general, the connection to each MPI/PROFIBUS connection of the bus system or directly at the interfaces of active and passive participants is also possible. The PG socket integrated in the connector housing allows connection of additional devices.
The NETLink® PRO PoE enables the implementation of TCP/IP on MPI/PPI/PROFIBUS with up to 32 simultaneous connection channels. With the switchable single-master operation, passive bus participants can be addressed. The integration of SCADA, HMI, and OPC applications is possible via the widely used ISO on TCP (RFC 1006) protocol. The applications are automatically detected and forwarded by the NETLink® PRO PoE.
The integrated web interface offers parameterization, diagnostic, and security features, and for functional enhancements the user can use our free diagnostic software SHTools to automatically perform firmware updates, for example. The software's latest version is available for download at www.helmholz.com.

· Electrical isolation for MPI/PPI/PROFIBUS
· MPI/PPI/PROFIBUS from 9.6 kbps to 12 Mbps
· For S7-200[1], S7-300[1], S7-400[1]

The NETLink® PRO Compact combines flexibility with a compact design. Power is supplied to the NETLink® through the CPU of the automation device or externally with DC 24 V as an option. The network connection can be used with any standard Cat-5 cable, making cable lengths up to 100 meters feasible without additional components.

In general, the connection to each MPI/PROFIBUS connection of the bus system or directly at the interfaces of active and passive participants is also possible.

The PG socket integrated in the connector housing allows connection of additional devices. The NETLink® PRO Compact enables conversion from TCP/IP to MPI/PPI/PROFIBUS with up to 32 simultaneously open connection channels, and passive bus participants can be addressed with the switchable single-master operation.

The integration of SCADA, HMI, and OPC applications is possible via the widely used ISO on TCP (RFC 1006) protocol. The applications are automatically detected and forwarded by the NETLink® PRO Compact. The integrated web interface offers parameterization, diagnostic, and security features, and for functional enhancements the user can use our free diagnostic software SHTools to automatically perform firmware updates, for example. The software's latest version is available for download at www.helmholz.com.

TECHNICAL DATA

NETLink® WLAN, PROFIBUS Ethernet WLAN gateway

The antenna shown here is not included!

NETLink® WLAN, PROFIBUS Ethernet WLAN gateway

The NETLink® WLAN is an Ethernet Gateway with integrated WLAN function. The "Ad-hoc" or "Infrastructure" mode can be configured via the RJ45 socket or using a web interface. All standard wireless security methods are supported: WEP, WPA, and WPA2.

The NETLink® WLAN draws its supply voltage via the CPU of the automation device or via externally supplied DC 24 V. The 1.2 m long connection cable is designed as an active line and thus does not influence other participants installed in the system. In general, connection to each MPI/PROFIBUS connection of the bus system or directly at the interfaces of active and passive participants is also possible. The PG socket integrated in the connector housing allows connection of additional devices. The NETLink® WLAN enables implementation of TCP/IP on MPI/PPI/PROFIBUS with up to 32 simultaneous connection channels. With the switchable single-master operation, passive bus participants can be addressed. The integration of SCADA, HMI, and OPC applications is possible via the widely used ISO on TCP (RFC 1006) protocol. These are automatically recognized and forwarded by the NETLink® WLAN.

The integrated web interface offers configuration, diagnosis, and security functions. For function expansions, the user can independently carry out, for example, firmware updates with the free diagnosis software SHTools. The software's latest version is available for download at www.helmholz.com.

Accessories note
For antennas for WLAN, see page 32.

FEATURES

- RFC 1006 (ISO on TCP)
- CPU-to-CPU communication (with S7-300[1] and S7-400[1])
- Connectable WLAN interface (802.11 b/g) with speeds of up to 54 Mbps
- Support for all common S7 engineering tools
- Dynamic address assignment using DHCP
- Security functions for securing TCP/IP access
- PLC write protection feature can be enabled and disabled
- Up to 16 TCP connections
- Up to 32 MPI/PROFIBUS connections
- Easy configuration via web interface
- Web interface diagnostic page with a layout that is easy to follow and understand
- Variables can be monitored on a browser window
- Support for configuring slave parameters
- Electrical isolation for MPI/PPI/PROFIBUS
- MPI/PPI/PROFIBUS from 9.6 kbps to 12 Mbps
- For S7-200[1], S7-300[1], S7-400[1]

WHAT ARE CPU-TO-CPU COMMUNICATIONS?

You can use S7 basic communication in order to implement a CPU-to-CPU connection. The MPI and PROFIBUS connection types are supported on all S7-300[1] and 400[1] PLCs.

The firmware of Siemens CPUs has system functions (SFCs) for transmitting data between two stations. All NETLink® Ethernet gateways support the S7 mechanisms X_PUT and X_GET (read and write data from/to a communication partner outside the local S7 station).

For this type of client-server communication, the well-known RFC1006 transport protocol (ISO on TCP) is used. On the receiving side (client), CPs or PROFINET CPUs that also support this protocol can also be used, for example.

The connections are not configured, but are explicitly established for the SFC call. A connection resource is therefore permanently assigned only for communication on the "active" side. The "passive" side responds to the requests of the active party and therefore only requires a resource when it establishes a connection. In use, this results in the advantage that function calls only need to be saved on the active side (server).

If a previously configured X_PUT/X_GET process is to be expanded by TCP/IP, only one additional X_PUT (with the parameters for the remote station – see graph on the bottom left) will be included in the program execution to open the communication channel via a NETLink® Ethernet gateway.

The amount of transferable useful data per communication order is limited to 76 bytes throughout the system.

For configuration support (also for beginners), Helmholz provides simple example projects for the STEP[1] 7 programming software at no cost. Based on the associated application description, the CPU-to-CPU communication can be realized in just a few steps.

ETHERNET CPU/CP TO MPI/PROFIBUS

As a function extension, all NETLink® Ethernet gateways now support the asynchronous data exchange function with the Siemens communication modules SFB14 ("GET") and SFB15 ("PUT").

These system function blocks are available in the Siemens CPUs and forward the readout or writing tasks through the NETLink® adapter, which is connected to the MPI or PROFIBUS interface of a remote CPU.

For this type of CPU-to-CPU communication, the network cable can be connected directly to an Ethernet CPU/CP with NETLink®. The corresponding non-specific S7 connection is assigned in the NetPro configurator using a PC station. Helmholz also provides an application description and a simple example project for this. A general function description can also be found in the original Siemens documentation.
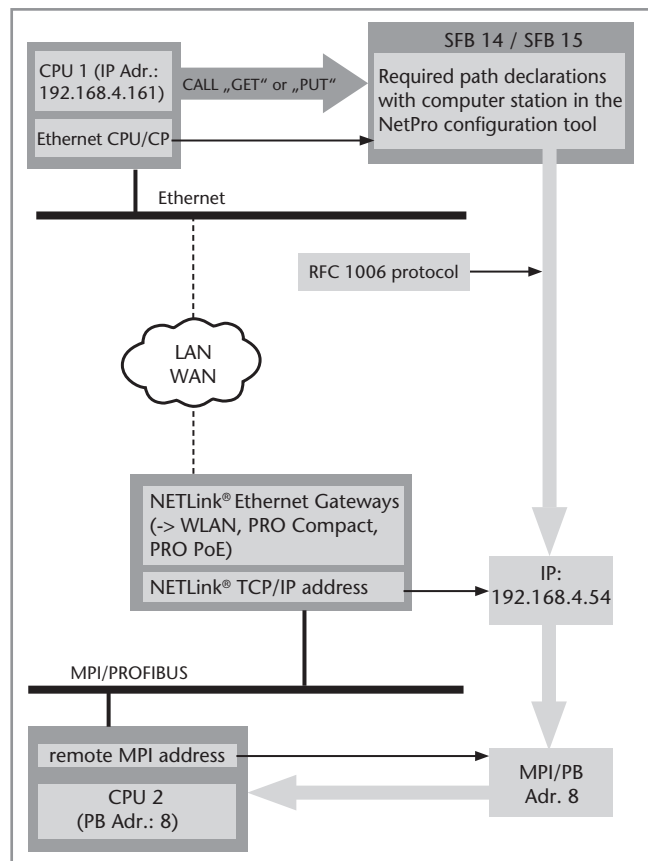

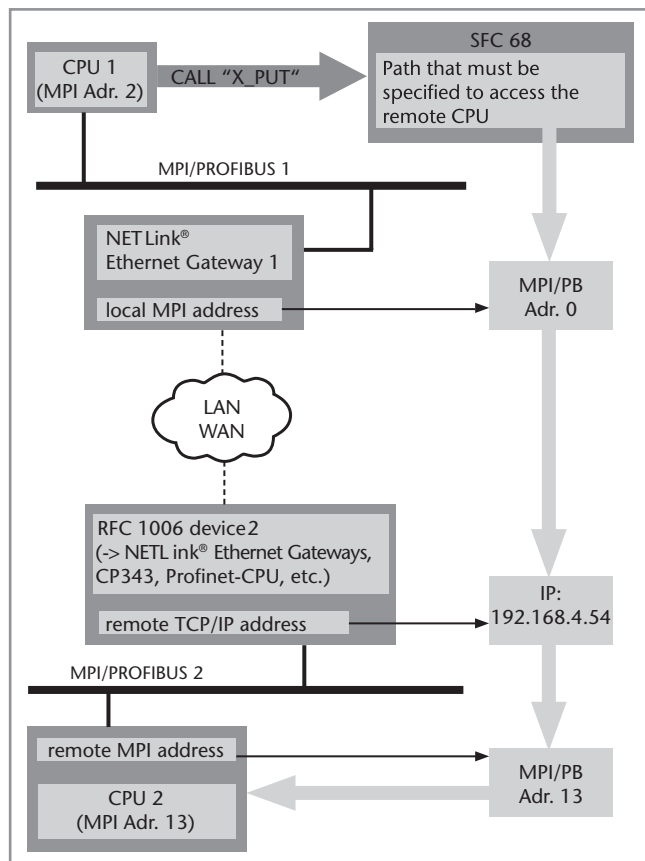

1) S7-200, S7-300, S7-400, and STEP are registered trademarks of Siemens AG.

NETLink® USB Compact, mini PROFIBUS USB gateway

The NETLink® USB Compact combines flexibility and a compact design with the advantages of plug and play. It can be integrated on each MPI/PROFIBUS interface of the bus system.

The PG socket integrated in the housing allows connection of additional devices. The connection to the PC is established with the 3 m high-speed USB cable.

The NETLink® USB Compact is supplied with voltage by the USB bus; on the USB side, the full-speed (12 Mbps) and high-speed (480 Mbps) protocols are supported.

The NETLink® USB Compact enables the implementation of a USB interface to the MPI/PROFIBUS for programming or visualization, with the full transmission rate of up to 12 Mbps and a maximum of 32 simultaneous links. The baud rate is detected automatically, and passive bus participants can be addressed in single-master operation mode. The supplied driver automatically integrates with the S7 Engineering Tools.

In addition, the MPI/PPI/PROFIBUS is electrically isolated from the USB interface (function separation).

SHTools is included as configuration and diagnostics software. This means that a firmware update can be performed automatically at any time for function extensions.

The software's latest version is available for download at no charge at www.helmholz.com.

FEATURES

· Support for all common S7 engineering tools
· Up to 32 MPI/PROFIBUS connections
· Support for configuring slave parameters
· Electrical isolation for MPI/PPI/PROFIBUS
· MPI/PPI/PROFIBUS from 9.6 kbps to 12 Mbps
· USB 2.0 with speeds of up to 480 Mbps (high-speed)
· Does not require a separate power supply
· Comes with female PG connector as standard
· For S7-200[1], S7-300[1], S7-400[1]

Quick access to S7/S5 data with 32/64-bit PC architecture

In the S7/S5 OPC server from version 4.10, the number of supported operating systems has been extended. It provides quick and convenient access to the process data of your PLCs.
After installation on a Windows PC (XP/2003/Vista/2007/2008), the standardized OPC interface is available for data exchange with the following controllers, among others: S7-200[1]/300[1]/400[1], LOGO! 0BA7, WinAC[1], C7, and S5-CPUs of the U-series.
In this way any OPC-compliant client application can read and write the required input/output data, data blocks, markers, timers, and counters into the S7/S5 controllers.
Addressing of the variables is consistently carried out in the familiar S7 semantics and can, if desired, be imported directly from an Excel file or an S7 project.
An existing control program in your PLC does not need to be adapted for communication with the S7/S5 OPC server. This means that no detailed knowledge about the specific PLC program is required.
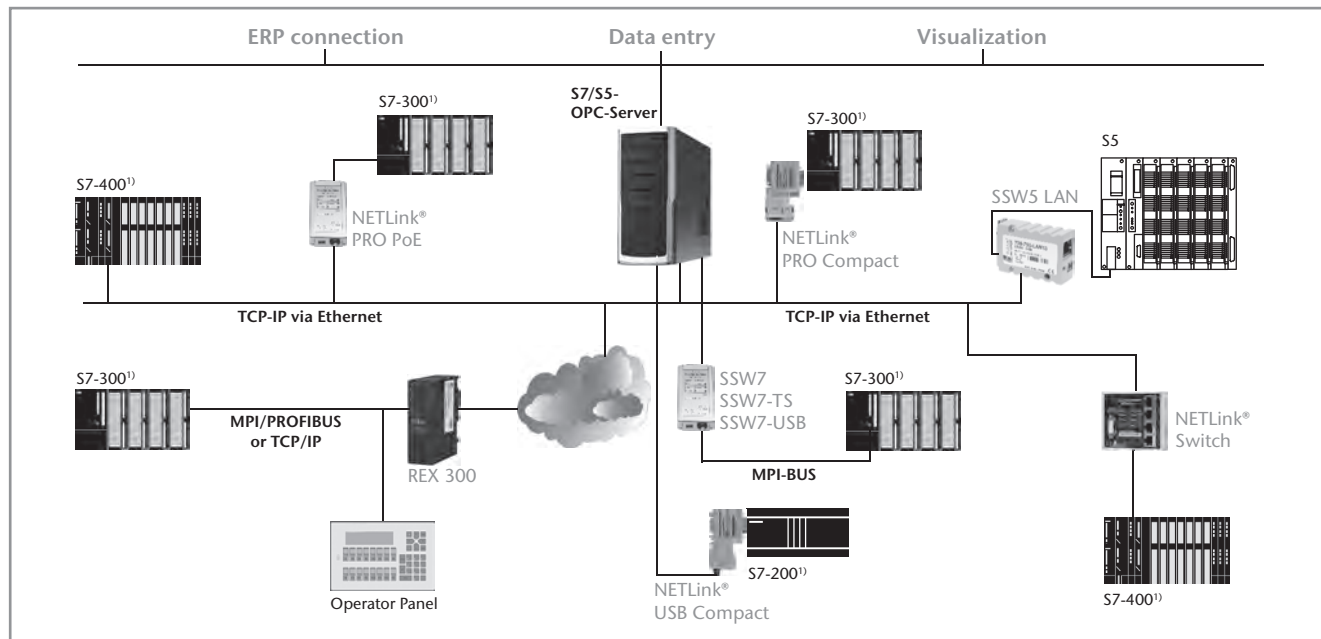

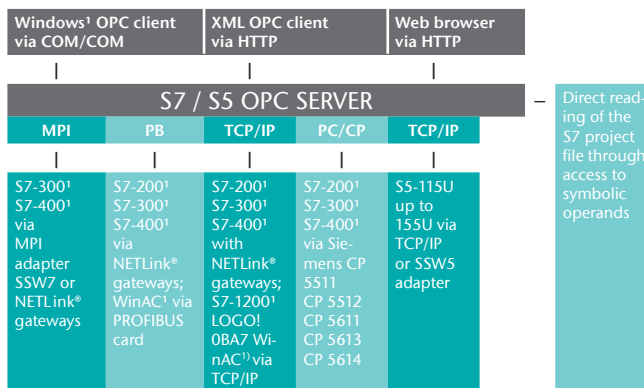

Flexible connectivity

For connecting your controllers to the S7/S5 OPC server, there are a variety of options available, such as TCP/IP, PROFIBUS, MPI, PPI, or AS511. In the S7/S5 OPC server configuration menu, up to 16 communication devices can be activated, with which parallel data exchange can then be implemented. Using the communication protocol TCP/IP (RFC1006), simultaneous access to up to 256 controllers is also possible in the maximum expansion stage.
For communication, Helmholz offers the following communication adapters:
· All products in the REX and NETLink® family
· SSW7, SSW7-TS, SSW7-USB for MPI
· SSW3, SSW4 and SSW5 for AS511
Some communication modules from other manufacturers, such as Siemens CP 243, 343, and 443, are also supported. An improved license management system has been developed in order to optimize the USB drivers included with the hardware dongle so as to allow the use of licenses in virtual machines (VMWare[3], ESX[3], etc.).

Integrated web server

The S7/S5 OPC server has a built-in web server. This can be used for diagnosing the OPC server functions as well as for providing their own websites for operation and monitoring using any standard browser.
The architecture and performance of the Web server is designed for smaller visualizations.
In addition to supporting OPC Data Access 1.0a, 2.05, and 3.0, starting with this version non-Windows-based applications can use the S7/S5 OPC server using OPC XML DA.
The latest OPC server version[2] is available for download (incl. all technical information) at www.helmholz.com.

CAN 300 PRO, communication module

The CAN 300 PRO module, for use in an S7-300[1] from Siemens, enables connection of CAN participants with the automation device.

The module can be plugged into either the central frame or the expansion frame. It supports CAN 2.0A (11 bit) and CAN 2.0B (29 bit) telegrams with a freely selectable baud rate from 10 kbps to 1 Mbps.

The CAN 300 PRO can send and receive CAN telegrams in Layer 2 mode. In the CANopen® master mode, the data of the CANopen® slaves can be processed as a process map in the PLC.

Use as a CANopen® slave is also possible. For standard applications, such as motor control with CANopen®, application examples are available. In addition, handling blocks for the SAE J1939 protocol are available.

There are 16 freely settable timers available in the CAN 300 PRO. Each timer can trigger a freely programmable CAN telegram. This means the synchronous protocols widely available in drive and servo control are easy to implement using the CAN 300 PRO.

A DIP switch for setting the baud rate and station address facilitates commissioning. An optional Micro memory card stores the project. In this way, replacement of the parameterization or the module during servicing can be carried out quickly.

6 LEDs indicate the operating status of the module. There is a USB interface for diagnostics and parameterization.

The CAN 300 PRO also works in the extended ambient temperatures of -25 °C to +60 °C.

A USB programming cable is included in the delivery.

FEATURES

· Layer 2, 11 bit and 29 bit (CAN 2.0 A/B)
· CANopen® master on the module
· DIP switches for address + baud rate
· Memory card for project backup (optional)
· USB interface for parameterization and diagnostics
· Extensive CAN bus diagnostic possibilities
· Can also be used as CANopen® slave
· Extended ambient temperature

CAN connected

CANopen®

Member of: **CiA**

The CAN 400 module, for use in an S7-400[1] from Siemens, enables connection of CAN participants with the automation device. The module can be plugged into either the central frame or the expansion frame.

It supports CAN 2.0A (11 bit) and CAN 2.0B (29 bit) telegrams with a freely selectable baud rate from 10 kbps to 1 Mbps.

The CAN 400 can be operated as Layer 2, CANopen® master or CANopen® slave.

The module contains the scripts for "Power On", "Stop -> Run", "Run -> Stop", "Power Off". Using a multi-stage acceptance mask, relevant IDs can be pre-filtered for the automation device.

In the CAN 400, there are 16 freely settable timers up to a resolution of 1 ms. Each timer can trigger a freely programmable CAN telegram. This means the synchronous protocols widely available in drive and servo control are easy to implement using the CAN 400.
Note

On page 75 you will find information on the parameterization software CANParam and on the handling blocks for the PLC. In the first use, handling blocks for the PLC are needed.

Parameterization tool CANParam

The CAN modules are configured on the PC with the parameterization tool CANParam (included in the software package 800-600-1AA11). This means the communication parameters can be easily set. The parameters for a module can be stored in a project on the PC.

The CAN modules support both the protocol format CAN 2.0A (11 bit) and CAN 2.0B (29 bit).
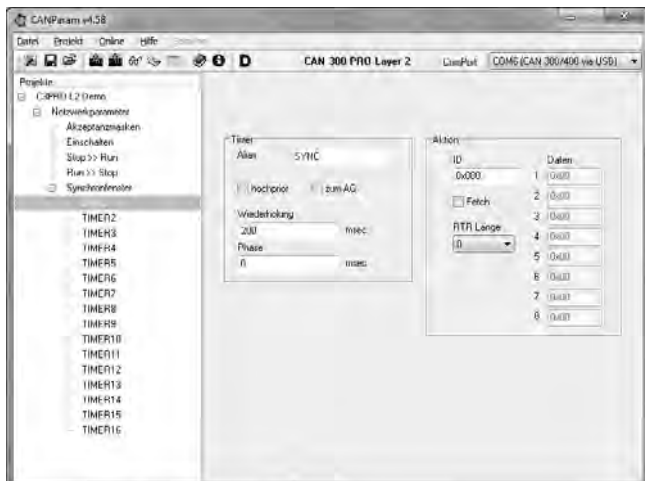

Acceptance masks are available in the CAN modules. Using these masks, it is possible to activate or block various telegram IDs for reception. Express masks filter high-priority CAN telegrams to pass them directly to the PLC.

For time-dependent events, such as the SYNC frame in CANopen®, up to 16 timers with a resolution of up to 1 ms are available in the CAN modules. Each timer can transmit any CAN telegram. The timers can be started, stopped, and changed from the PLC. In addition, synchronized transmission of CAN messages can be enabled. With this, a time window in which all data will be transmitted synchronously is specified.

Using freely programmable scripts, upon certain events, such as "Power ON" or "PLC Stop -> Run", CAN messages can be sent or timers started.

An integrated diagnostic function facilitates troubleshooting during commissioning of the module.

For the CANopen® master function of the CAN 300 PRO, the behavior of the master can be defined and the slaves that exist in the CAN bus can be parameterized.

To simplify configuration, the CANParam software can read in the EDS files from CANopen® slaves.

Handling blocks

The CAN modules are entered in the hardware configurator of the programming software as CP module (CAN 300, CAN 300 PRO) or as FM module (CAN 400) and addressed in the STEP[1] 7 program / TIA Portal[1] using handling blocks.

For the CAN modules, handling blocks are available for Layer 2 communication and for the CANopen® master (DS301 V4). For use of the CAN modules as CANopen® slaves, handling for the profiles DS401 (IO modules) and DS420 (Corrugator) is available. Additional profiles can be prepared on request.

Functionality of the Layer 2 handling:
· Send CAN telegram
· Receive CAN telegram
· Start/stop timer
· Module reset
· CAN controller reset

With the handling blocks for Layer 2, any number of CAN protocols can be implemented in 11-bit and 29-bit mode.

Functionality of the CANopen® master handling:
· Read/send SDO
· SDO segmented download/upload
· Receive emergency
· Send/request PDO
· Node guarding / heartbeat monitoring
· Network management functions
· Error control

Application examples for control of drives according to profile DS402 are also available.

Furthermore, handling blocks for the application of the CAN 300 PRO as a DeviceNet slave are available.

DP/CAN coupler CANopen® Layer 2

FEATURES

· Up to 15 CANopen® participants
· Up to 1 Mbps CAN baud rate
· Up to 12 Mbps PROFIBUS-DP
· Address setting using DIP switches
· Easy configuration via GSD file
· No handling blocks or parameterization software
· necessary
· CANopen® master and CAN Layer 2 possible
· Address and operating mode can be set via DIP switch
· 3 status LEDs
· Extended ambient temperature
· USB interface for firmware updates

The DP/CAN coupler integrates CANopen® devices into a PROFIBUS DP network. It is a full-fledged CANopen® master and supports network management, SYNC telegrams, and node guarding to monitor the participants.
On the PROFIBUS-DP, the DP/CAN coupler is a normal participant. The IO data of the CANopen® participants is shown in the PROFIBUS in a transparent and freely configurable manner.
The DP/CAN coupler is integrated in the hardware configurator with a GSD file and can be completely configured there. Additional tools are not necessary.
On PROFIBUS all standard transfer rates up to 12 Mbps are supported, on the CAN bus up to 1 Mbps.
The PROFIBUS address is set using a DIP switch.
Parameterization of the CANopen® participants using SDO telegrams and management of emergency messages is also possible.
Alternatively, the DP/CAN coupler can also be used as a CAN Layer 2 device on the CAN bus. This makes it possible to also integrate customer-specific CAN protocols via PROFIBUS.

Application example DP/CAN coupler CANopen®

TECHNICAL DATA

Dimensions in mm (D x W x H)	114 x 18 x 108
Weight	Approx. 110 g

DP/CAN coupler CANopen® Layer 2 (incl. manual, CD with software)	**700-650-CAN01**

DP/CAN coupler Layer 2

FEATURES

· Up to 1 Mbps CAN baud rate
· Up to 12 Mbps PROFIBUS-DP
· Address setting using DIP switches
· Easy configuration via GSD file
· No handling blocks or parameterization software
  necessary
· Any protocols via Layer 2 possible
· CAN 2.0 A (11 bit)
· CAN 2.0 B (29 bit)
· Timer for cyclical telegrams
· 3 status LEDs
· Extended ambient temperature
· USB interface for firmware updates
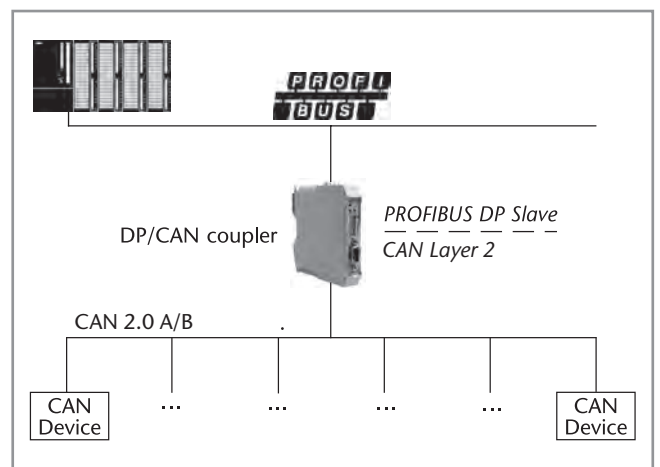

The DP/CAN coupler Layer 2 allows you to connect any number of CAN participants to the PROFIBUS-DP.

The DP/CAN coupler Layer 2 must be parameterized in the hardware configurator as a PROFIBUS participant. Corresponding GSD files are included with the device.

The PROFIBUS side is configured as a DP slave; the interfaces correspond to EN 50170 and are electrically isolated.

The baud rate from 9.6 kbps to 12 Mbps is automatically detected, and the size of the input and output information is up to 312 bytes.

The CAN bus interface complies with ISO/DIN 11898-2 and is electrically isolated.

The DP/CAN coupler can send and receive any CAN messages. Messages can be defined with a fixed identifier, whose data is always visible as a peripheral image in PROFIBUS. Alternatively, the DP/CAN coupler Layer 2 has a transmit and receive buffer for any CAN messages.

Application example DP/CAN coupler Layer 2

CAN Bus connector, 90° cable outlet

CAN Bus connector, axial

The bus connectors for the CAN bus are used to connect a CAN bus participant to the CAN bus line. The connector is quickly mounted and has an integrated, connectable terminating resistor.

Helmholz offers you the bus connector with vertical cable outlet and for transmission rates up to 1 Mbps.

The bus connector is plugged directly onto the CAN bus interface (SUB-D socket, 9-pin) of the CAN bus participants. The CAN bus cables are connected using 6-pin screw terminals.

A slide switch is used to set whether the connector is to be used as a node or at the segment end. The switch can also be operated in the installed condition. The setting is clearly visible.

In node setting ("OFF"), the connector must be operated when the incoming and outgoing bus are connected to each other. The terminating resistor is then ineffective.

As segment end ("ON"), the connector must be set on the first and last (outermost) participants of the segment. In this case the terminating resistor is connected on the incoming bus, and the outgoing bus is disconnected.

The bus connectors for CAN bus are also available in axial design and with 24 V supply for participant supply.

The CAN connectors also work in the extended ambient temperature range of -25 °C to +85 °C[1].

FEATURES

· 24 V supply for participant supply (only at 90°)
· Metalized housing
· No parts that can be lost
· 90° and axial cable outlet available
· Small size

CAN Bridge, connecting CAN networks

FEATURES

· Enlargement of the network scope
· Connect different CAN networks
  (different baud rates / different protocols)
· Physical disconnection (electrical isolation)
· Reduced bus load on both CAN networks
· Autobaud detection
· Easy configuration mode
· For use with CAN 2.0A & 2.0B, CANopen®, DeviceNet, SAE J1939
· DIN rail mounting

The CAN bridge makes it possible to connect two CAN networks of the same type or of different types. It can be used as a message repeater to expand network distances, as well as to connect different CAN networks together. It is immaterial whether the CAN networks have different baud rates or work with different protocols, such as CANopen® and a proprietary protocol.
A flexibly adjustable filtering logic can accept freely selectable identifiers and transfer them to the other network. The CAN messages are forwarded to the respective other CAN network according to the store-forward principle and sent out again.
With the CAN bridge, the CAN networks are physically decoupled (electrical isolation) and the bus load is reduced on both CAN networks. The CAN bridge allows a flexible design of the network topology; star and tree structures as well as extensive line structures can be implemented.
The CAN bridge can be configured for simple applications using the two rotary coding switches. For more complex applications, the supplied CAN bridge parameterization software can be used to flexibly adjust the filtering and forwarding of CAN telegrams. Up to 256 range filters are available, along with up to 4 bit filters for address filtering. The configuration is imported through a USB interface and can also be read out again.
The CAN bridge works both in 11-bit and 29-bit mode, and can communicate with baud rates from 10 KBaud to 1 MBaud. It has a powerful microcontroller that can operate even with extremely high data rates and bus loads without loss of messages. 5 LEDs indicate the status of the device and the connected CAN networks.
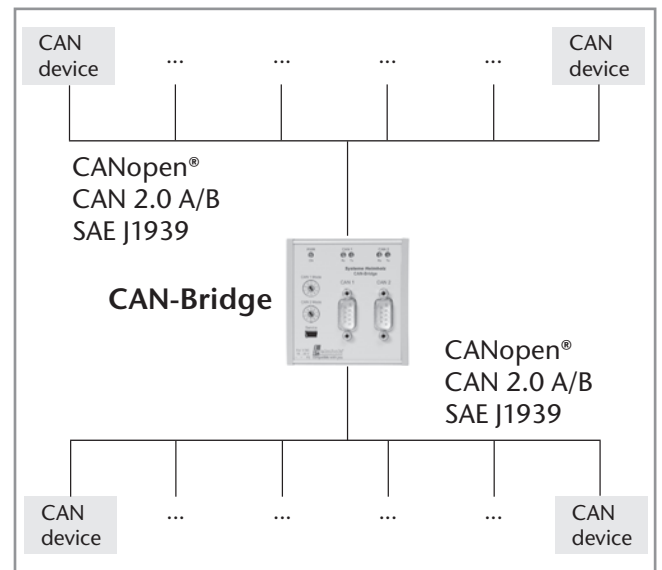

TECHNICAL DATA

PN/CAN Gateway

FEATURES

· PROFINET IO device as per IEC 61158-6-10
· Integrated 2-port switch
· Full duplex 100 Mbps transmission rate
· Conformance class B
· Media Redundancy Protocol (MRP)
· Up to 127 CANopen® participants
· Up to 1 Mbps CAN baud rate
· Easy configuration via GSDML file, no handling blocks or parameterization software necessary
· CANopen® master and CAN layer 2 possible
· Up to 16 PDOs per CANopen® slave
· SDO communication, emergency messages, participant monitoring with heartbeat and node guarding
· Extensive diagnostic functions
· 3 two-color status LEDs
· USB interface for online diagnostics and firmware update
· DIN rail mounting

The PN/CAN gateway connects CANopen® devices in a PROFINET network. At the same time, it is a full-fledged CANopen® master. As the master, it supports gateway network management, SYNC telegrams, and node guarding / heartbeat for monitoring the participants.

On the PROFINET network, the PN/CAN gateway is a PROFINET IO device that supports transfer rates up to 100 Mbps full duplex, and on the CAN bus up to 1 Mbps is supported.

The IO data (PDOs) of the CANopen® participants is transparently displayed in a freely configurable manner in the PROFINET network and can be processed directly in the PLC.

The PN/CAN gateway is integrated with a GSDML file in the hardware configurator and can be completely configured there. Other software tools for parameterization or handling blocks for programming are not required.

Parameterization of the CANopen® participants using SDO telegrams and management of emergency messages is also possible. **Device variants with CAN Layer 2 and CANopen® Slave are in development.**

Memory cards for the 1200/1500 series

Micro memory card for the 300 series

The memory cards are suitable for use in S7-1200[1]/S7-1500[1] controllers of Siemens AG.
They are available in the following memory sizes:
4 MB, 12 MB, 24 MB, 256 MB and 2 GB.

The Micro memory cards are suitable for use in the S7-300[1] and ET200[1]S CPU controllers of Siemens AG.
Our product range includes the entire range of the most popular modules plus the special variants 256 kB and 1 MB.
The Micro memory cards are available in the following memory sizes: 64 kB, 128 kB, 256 kB, 512 kB, 1 MB, 2 MB, 4 MB, and 8 MB.

Example assignment

The analog input module is suitable for connection of current transmitters in the range up to ± 20 mA, voltage transmitters in the range up to ±10 V, Pt100/Ni100 sensors, and resistors.
All inputs can be programmed either as voltage or current inputs for Pt100/Ni100 sensors and resistors, freely selectable in their combination.
The signal lines are connected to the corresponding front connectors and can be marked in the label field.
The modules can be fully parameterized with the hardware configurator of the programming software. A hardware configuration is not necessary (no measuring range module).

Accessories note
Front connectors and preassembled cables are available as accessories (see pages 106-109).

SAS 340, communication module

Application example for SAS 340

The SAS 340 is a serial communication module for use in S7-300[1] systems. It allows the connection to the PLC of serial devices such as barcode scanners, operator terminals, serial printers, PCs, PLCs of other manufacturers and supports the protocols ASCII and 3964R.

Serial devices can be connected with RS232 or RS422/RS485. The 9-pin Sub-D socket (15-pin with RS422/485) with standard pin assignment is provided for connecting the partner devices.

The additional USB device interface enables the connection of the PLC to PC systems, many of which have no conventional physical port. A virtual COM port driver enables the use of software that expects a COM interface.
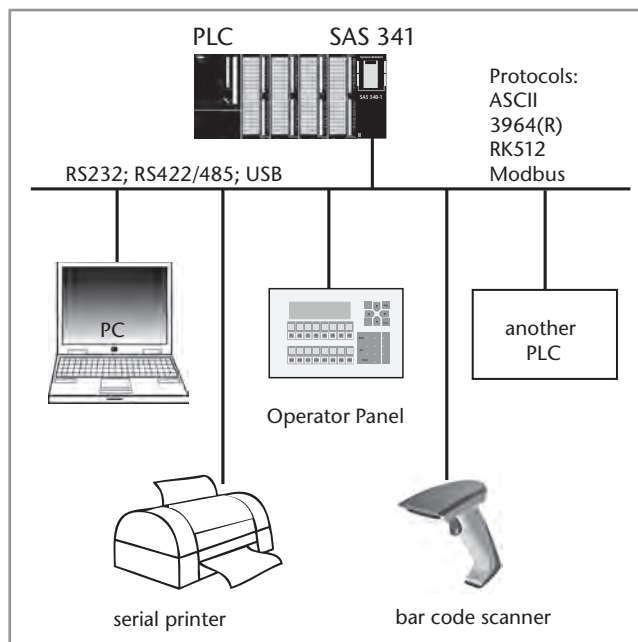

The SAS 340 features advanced functions such as support for higher baud rates up to 115 kBaud, making it flexible without any loss of compatibility.

The handling blocks supplied enable simple and flexible integration into the PLC. The module is parameterized in the hardware configurator of the PLC. Advanced functionalities (such as higher baud rates) can be activated easily with the handling blocks.
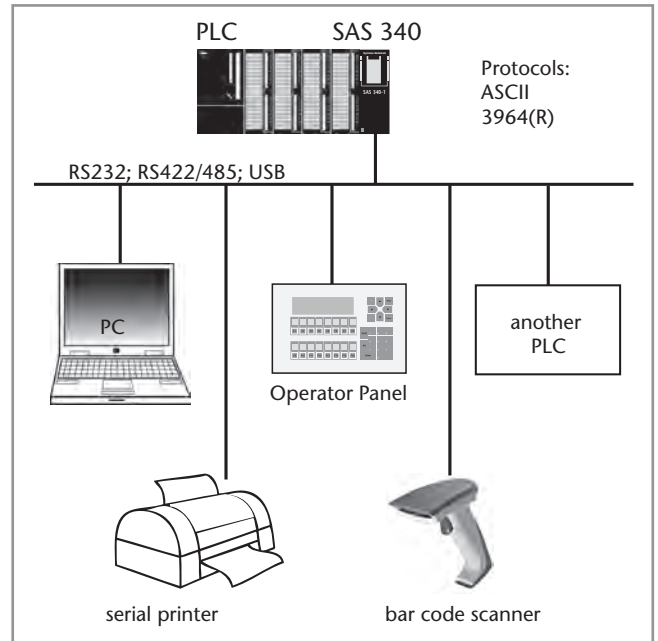

Note

To enable high integration density in the control cabinet, the SAS 340 is also available with 2 serial interfaces. Both interfaces can be configured independently and used in the PLC.

TECHNICAL DATA

Dimensions in mm (D x W x H)	116 x 40 x 125
Weight	Approx. 280 g

SAS 341, serial communication module

SAS 341, communication module

Application example for SAS 341

The SAS 341 is a serial communication module for use in S7-300[1] systems. It allows the connection to the PLC of serial devices such as barcode scanners, operator terminals, serial printers, PCs, PLCs of other manufacturers and supports the protocols ASCII, 3964R, and RK512.

Serial devices can be connected with RS232 or RS422/RS485. The 9-pin Sub-D socket (15-pin with RS422/485) with standard pin assignment is provided for connecting the partner devices.

The additional USB device interface enables the connection of the PLC to PC systems, many of which have no conventional physical port. A virtual COM port driver enables the use of software that expects a COM interface.

The SAS 341 features advanced functions such as support for higher baud rates up to 115 kBaud, making it flexible without any loss of compatibility.

The coupling of different PLC types to the S7-300[1] can be flexibly implemented using the standardized RK512 computer coupling protocol.

The handling blocks supplied enable simple and flexible integration into the PLC. The module is parameterized in the hardware configurator of the PLC.

Note

To enable high integration density in the control cabinet, the SAS 341 is also available with 2 serial interfaces.
Both interfaces can be configured independently and used in the PLC.

SAS 341-1 with Modbus RTU driver

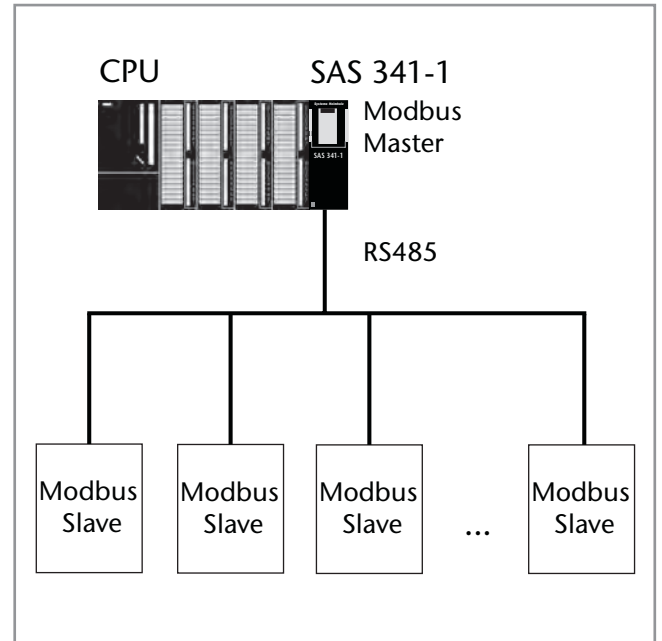

SAS 341-1 as Modbus master

The driver add-on "Modbus Master/Slave" enables communication with Modbus RTU-compatible devices. With this driver, the SAS 341 can operate either as a Modbus RTU master or Modbus RTU slave.

The driver is used for the SAS 341-1 with RS232 interface (700-341-1AH02) or for the SAS 341-1 with RS485 interface (700-341-1CH02).
With the RS232 interface, a point-to-point operation is possible, and with the RS485 interface, up to 32 participants can be addressed using the 2-wire half-duplex method.

In the communication with other systems, the Modbus RTU function codes 01, 02, 03, 04, 05, 06, 07, 08, 11, 12, 15, and 16 are supported.

The data exchange with the S7-CPU is in blocks in the supplied function blocks.

EIB 300, communication module for twisted-pair EIB/KNX

EIB 300, communication module for twisted-pair EIB/KNX

FEATURES

· Access to the EIB / KNX bus directly from the PLC
· Implementation of complex control and monitoring functions through PLC programming
· Configurable object operation with up to 240 objects
· Easy integration and handling
· ETS[2]3 and ETS[2]4 are supported

The EIB 300 is a communication module for use in S7-300[1] systems. It enables the connection of an EIB / KNX bus to the PLC, with the bus being placed directly on the module.

Through the possibilities of PLC programming, complex control and monitoring functions can be easily implemented on the EIB/KNX bus.

In "object mode," the EIB 300 is an active participant on the EIB/KNX bus with up to 240 objects, with all object types from 1 bit to 4-byte data size being supported.

The current object values in the PLC are mapped in a data block and exchanged with each PLC cycle. In this way the changes on the EIB side are transferred to the PLC, and values changed in the PLC are transferred to the EIB/KNX bus. In addition, "event" and "control flags" allow influence to be taken on the communication behavior in a targeted manner.

The configuration of the EIB 300 is in the PLC as a CP module. The handling blocks included in the scope of delivery enable easy integration of the EIB 300 into the PLC program. The EIB 300 is integrated as a new device in the ETS[2] software with a supplied sample project. In object mode, objects organized in various profiles can be configured and adapted to the respective application. Six colored LEDs indicate the current operating status of the EIB 300 and the EIB/KNX bus. The built-in USB interface is provided for firmware updates and more in-depth diagnosis.

FastPlug, front adapter for S7 modules

FastPlug, front adapter for S7 modules

The FastPlug front adapters are used for screwing and snapping onto 16 or 32-bit S7 input/output modules. The effort required for wiring is very low.

Through the use of pre-assembled system cables, connection errors are excluded. In this way interface modules / transfer modules can be quickly and safely connected to the S7 controller.

The FastPlug front adapters are available in a version for connection to a 16-bit input/output module with a 20-pin ribbon connector, as well as in the version for connection to 32-bit input/output modules with 2 x 20-pin ribbon connectors.

FEATURES

· Front adapter for flat ribbon connector (IDC)
· 20-pin and 40-pin
· Fast, safe, and cost-effective wiring
· Connection errors excluded

Front connector, 20-pin and 40-pin with screw contacts

Front connector, 40-pin with **EasyConnect**® technology

Front connector with screw contacts
The 20-pin and 40-pin front connector is designed with proven screw contacts.
They enable simple connection of sensors and actuators to input/output modules. In this way the wiring can be kept when replacing modules.

Front connector with EasyConnect® technology
The 40-pin front connector is manufactured with the patented **EasyConnect®** technology.
Fast wiring of the plug is ensured through opening and closing of the spring-loaded terminal by turning the screw (180° counterclockwise to open, clockwise to close), saving the user both money and installation time. Ferrules are not necessary.
Due to the lower design, the front cover of the module can be optimally closed even in the fully wired state.

Mounting rails

Mounting rail adapter for DIN rail

For all modules in the 300 and 1500 series, we offer the mechanical module rack in various prefabricated lengths.

For all communication modules (such as REX 300, DP/DP coupler, TS 300) designed for mounting on the mounting rail, we offer our mounting rail adapter for DIN rail.

Interface converters

Programming adapter
RK512 and HMI adapter
S5 interface converters

SSW7, MPI programming adapter

FEATURES

· Programming & visualizing
· Transfer rate up to 115 kbps
· MPI up to 187.5 kbps
· Power supply from the AD or external 24 V

Application example for SSW7

The SSW7 allows you to connect a PC or laptop with programming software to automation devices via every standard COM interface.

The SSW7 has automatic baud rate detection on the RS232 interface, which makes it possible for it to adapt to the set bit rate (9.6 to 115 kbps).

The MPI interface operates at 187.5 kbps or 19.2 kbps.

The SSW7 is supplied with voltage via the MPI bus from the CPU. With an optional 24 V connection, it can be used anywhere else on the bus line.
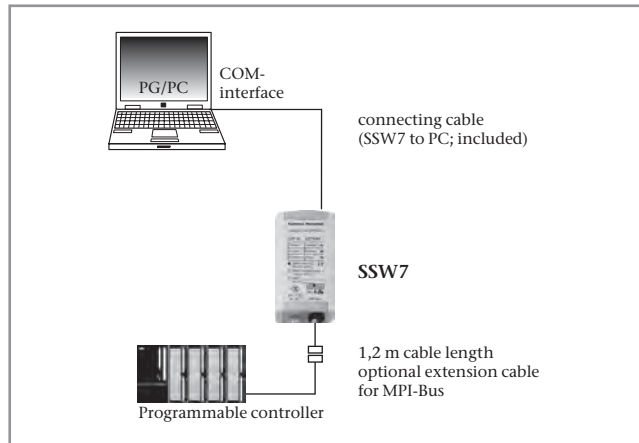

With the Speedup tool included in the scope of delivery, the maximum transmission rate of SSW7 can be achieved with any programming software.

Parameterization and diagnostic functions are possible using the SHTools software.

For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

TECHNICAL DATA

Dimensions in mm (D x W x H)	105 x 53 x 29
Weight	Approx. 180 g
Supply voltage	+24 V ±25 % from AD or external
Current draw typ.	30 mA
max.	45 mA
MPI interface Type	RS485
Transmission rate	19.2 or 187.5 kbps
Connector	SUB-D, 9-pin
Communication interface Type	RS232/RS422
Transmission type	Asynchronous serial
Transmission rate	19.2 kbps ... 115.2 kbps
Parity	Odd
Data format	8 bits
Protocols	PC <-> S7
Connector	Connector, SUB-D, 9-pin
Protection rating	IP 20

Starting with STEP[1] 7 version 5.5 SP2, Siemens no longer supports serial COM ports under Windows 7[2] 64 bit. The TIA Portal[1] also no longer supports any COM ports – regardless of what operating system it is installed on!

Our technical sales representatives can provide you with advice on alternatives.

1) STEP and TIA Portal are registered trademarks of Siemens AG.
2) Windows is a registered trademark of the Microsoft Corporation.

ORDERING DATA	ORDER NO.
SSW7, MPI programming adapter, RS232 (incl. 3 m programming cable, manual, CD with software)	**700-751-1VK21**

SSW7-USB, MPI programming adapter USB

SSW7-USB, MPI programming adapter USB

The SSW7-USB enables conversion from a USB interface to the MPI bus for programming software or visualization.
The SSW7 has a 1.2 m long MPI connecting cable which can be plugged directly into the CPU socket of the automation device and into any other point in an MPI network.
In the housing of the SSW7-USB, there is a USB socket of type "B". The SSW7-USB can be connected to the PC with the USB cable included in the scope of delivery. The SSW7-USB receives its voltage supply from the PC. It can therefore be used at any point on the MPI bus.
A driver for creating a virtual COM port is included. Parameterization and diagnostic functions are possible using the SHTools software.
For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

FEATURES

· Programming & visualization via USB
· MPI up to 187.5 kbps
· Power supply via USB
· Virtual COM port for flexible applications

Application example for SSW7-USB

TECHNICAL DATA

Dimensions in mm (D x W x H)	105 x 53 x 29

DIN rail adapter, short	**700-751-HSH01**
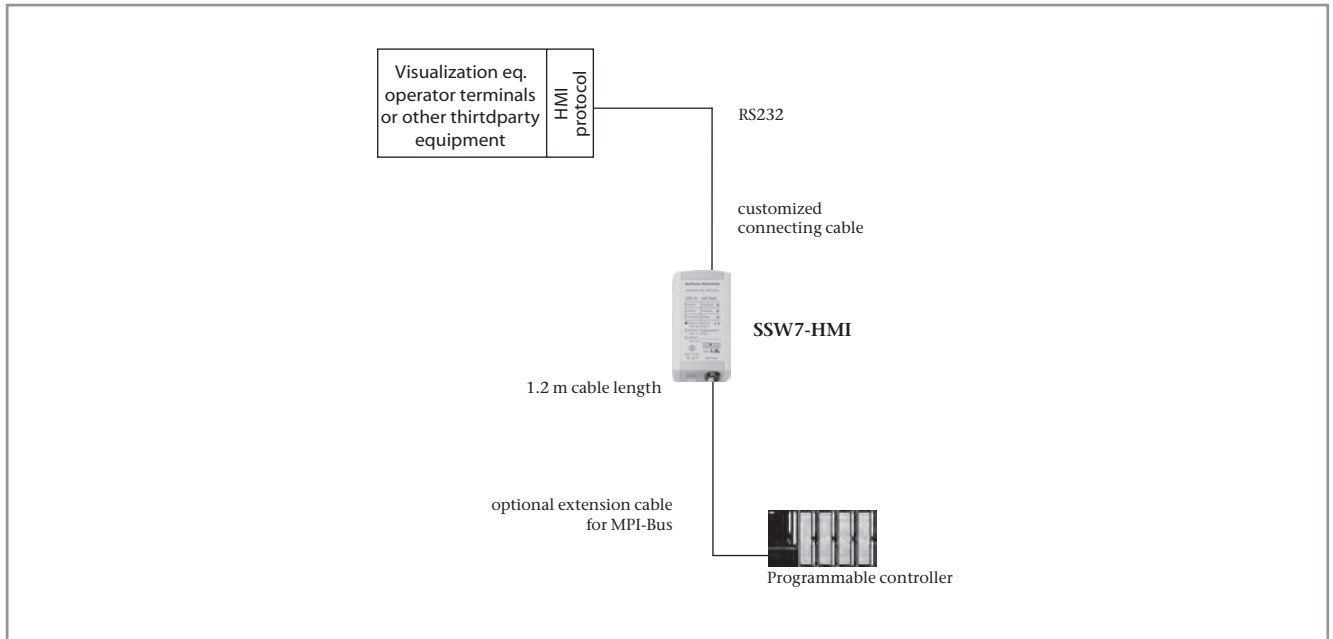

SSW7-HMI

The SSW7-HMI is designed for use with operator terminals, visualizations or other third-party devices that support the HMI protocol from Siemens.
The baud rate of the adapter is set by the protocol (from 4.8 to 115 kbps).
The SSW7-HMI is supplied with voltage via the MPI bus of the CPU. With an optional 24 V connection, it can be used anywhere else in the system.
We provide the SSW7-HMI with an additional programming interface on the connector, including a switchable terminating resistor.
Parameterization and diagnostic functions are possible using the SHTools software.
For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

SSW7-RK512, MPI adapter with RK512 protocol

Visualization eq. operator terminals or other thirdparty equipment

RK512 protocol

RS232 or RS422

customized connecting cable

SSW7-RK512

1.2 m cable length

optional extension cable for MPI-Bus

Programmable controller

SSW7-RK512

With the SSW7-RK512 it is possible to bring operator terminals, visualization, or other external devices to the S7 without adapting the software, if they support the RK512 protocol.

The SSW7-RK512 transmits data blocks, flags, inputs, and outputs. The MPI settings of the SSW7-RK512 can be changed by a parameterization program or with special RK512 telegrams to connect several SSW7-RK512 units or several ADs to an MPI bus.

The SSW7-RK512 has automatic baud rate detection on the RS232 interface, which makes it possible to adapt to the connected device (from 9.6 to 115 kbps). The MPI interface operates at 187.5 kbps.

The SSW7-RK512 is supplied with voltage via the MPI bus of the CPU. With an optional 24 V connection, it can be used anywhere else in the system.

We provide the SSW7-RK512 with an additional programming interface on the connector, including a switchable terminating resistor. The SSW7-RK512 is also available with RS422 interface. Parameterization and diagnostic functions are possible using the SHTools software.

For a firmware update, the latest SHTools version is available for free download on our website www.helmholz.com.

SSW5/LAN, S5 Ethernet converter

SSW5/LAN, S5 Ethernet converter

The SSW5/LAN is an S5 Ethernet converter which is suitable for programming S5 controllers via Ethernet.
A special virtual COM driver enables the use of common programming tools such as STEP[1] 5 V7.2 from Siemens.
The power is supplied via the CPU or externally (24 V). A virtual COM port is available for all current commissioning tools.

FEATURES

· Program S5 via TCP/IP
· Virtual COM port for all common commissioning tools
· Power supply from the CPU or external 24 V
· Fits onto any standard S5-CPU
· Unique detection on the network through device names

Application example SSW5/LAN

TECHNICAL DATA
Dimensions in mm (D x W x H)	65 x 21 x 42
Weight	Approx. 50 g
Power supply Voltage	Via AD interface or external
Current draw typ.	Approx. 55 mA
S5 interface Type	TTY, 20 mA
Transmission rate	9.6 kBaud
Protocol	AS 511
Connector	Sub-D connector, 15-pin
Ethernet port Type	10 Base-T/100 Base-T; RJ45 socket
Transmission rate	10/100 Mbps
Port for device discovery	2362 (UDP)
Port for transmission	2001 (TCP/IP)
Ambient temperature Transport and storage temperature	0 °C ... +60 °C -25 °C ... +75 °C
Protection rating	IP 20

1) STEP is a registered trademark of Siemens AG.

ORDERING DATA

	ORDER NO.
SSW5/LAN, S5 Ethernet converter (incl. 3 m Ethernet cable, manual, CD with software)	**700-750-LAN13**

SSW5/USB programming cable

Application example SSW5/USB programming cable

The SSW5/USB programming cable enables a connection between a PC or laptop via USB to an S5 PLC.
A special virtual COM driver enables the use of common programming tools such as STEP[1] 5 V7.2 from Siemens.
The SSW5/USB is equipped with a 15-pin Sub-D connector.

TECHNICAL DATA

Conversion Interface	USB to TTY USB
Transmission	USB
TTY interface	SUB-D connector, 15-pin
Max. transfer rate	38400 bps
Max. cable length	5 m
Tapping of the supply voltage	On the USB side

1) STEP is a registered trademark of Siemens AG.

SSW5/USB, S5-USB programming cable 5 m (incl. manual, CD with software)	**700-750-1US13**

SSW3, interface converter cable

The SSW3 interface converter cable enables a connection between a PC and a PLC.
The RS232/TTY converter is completely integrated into the 15-pin connector housing; an external power supply is therefore not required. The transmission of data signals is over an RS232 connection.

Use in conjunction with:
· Every programming software on a PC
· Online linking to the AD with data exchange
· Visualization and linking software

Service

Product training
User workshops
National and international contacts

Helmholz also offers product training courses if required:
In our product training, we teach you all you need to know about correct handling of products using practical examples.
Our consultants are available by appointment to advise you in detail.
The training takes place in Großenseebach in the main building.
On-site training is also possible.
Please request an individual quote for this.

Contents of a CAN training course:
· CAN concept
· CAN Layer 2 protocol
· CANopen® protocol
· SAE J1939 protocol
· CAN 300/CAN 400 parameterization & commissioning
· CAN 300/CAN 400 programming in STEP[1] 7
· DP/CAN coupler

ORDERING DATA	ORDER NO.
CAN training CAN/CANopen®/CAN products, 1 day, per participant	**400-600-CAN01**

1) STEP is a registered trademark of Siemens AG.

YOU WANT ...

· to carry out remote maintenance independently
  of the modem?
· fast remote maintenance?
· remote maintenance of Ethernet devices?
· high availability?

Then take part in one of our user workshops!
In our user workshops on the topic of Ethernet routers, find out which requirements are necessary for Internet remote maintenance, what problems must be considered, and how to deal with them.
For optimal learning of the course content, you will configure a remote maintenance connection yourself on a test setup.
The workshops take place in Großenseebach in the main building. On-site workshops are also possible.
Please request an individual quote for this.

Objective
As a participant, you will be trained on the following topics in a practical manner:

REX 100
· Commissioning
· CTM (Configuration Transfer Manager)
· Applications
· WEB2go

VPN portal myREX24
· Opportunities / benefits
· Performing remote maintenance

REX 300
· MPI/PROFIBUS devices
· Usage without VPN portal
· Advanced parameterization
· Reach serial devices

Your advantages
· Small groups with a maximum of three participants per test
  setup
· Theoretical and practical knowledge in one workshop
